Attn: John Robertson

Dear John,

Pursuant to our Contract for the Intellivision Video Console, please review and advise the impact of the following possible design changes.

Do not implement these changes until so directed, in writing.

1. Incoming I.C. inspection.

Based on a 1% process average of consigned General Instrument Microprocessors, please review performing a 100% incoming comparative operation inspection to reduce the estimated AQL of 7.3% to less than 1.0%.

2. Addition of fan

Based on D. Chandler's verbal input, please review source, and estimate the impact of adding a fan to the Bill of Materials and production units.

If you have any questions, please contact me.

Sincerely yours,

Howard L. Cohen

Dear Howard:

This letter confirms our telecon of 12/20/78 relative to the subject.

Cliff Perry has advised R. Asplund that he is gathering a complete set of the subject documents for CMO and will have them sent to us. To help Cliff in this effort, enclosed are two lists, one detailing the "Prints Needed by CMO" and the other detailing the "Prints CMO Has But Requires Confirmation of Their Validity and Updating to Correct Revision Levels."

We trust the list provided will assist you in urgently providing the required documents in the confirmation of the validity or the updating of those documents in our possession.

Please advise date the documents will be available to CMO.

Very truly yours,
